

IP TRANSIT

lyntia
NETWORK TO BUSINESS

With lyntia's Internet Transit service, you get direct Internet connectivity through our Tier 1 backbone. A service designed to facilitate high-performance, high-capacity access. We have peering agreements with the biggest Internet networks worldwide to make this a reality. At competitive prices, with outstanding customer service.

SOLUTIONS

- Port types: Fast Ethernet (FastE), Gigabit Ethernet (GbE), Gigabit Ethernet (GbE) and 100 Gigabit Ethernet (100GbE)
- IPv4 and native IPv6 (dual stack), static routing and BGP routing
- Link aggregation
- Guaranteed traffic delivery
- DDoS attack mitigation service available
- Carrier-grade NAT service (CG-NAT)

ADVANTAGES

- National and international direct peering with major providers
- Low latency and few hops
- Flexible billing: flat rate and burstable
- Co-location option: we offer the option of installing your own equipment in our POPs
- Flexibility and scalability: choose from different connection and billing options so you can grow at your own speed
