

CO-LOCATION

lyntia
NETWORK TO BUSINESS

We offer the possibility of co-locating your communications equipment in our infrastructures (Towers, Data Centres, Nodes) in Spain and our POPs in Europe and America.

Our Data Centre service is present in the main POPs in Europe (London, Frankfurt and Marseilles) and America (Miami and New York) to facilitate the exploitation of our fibre optics and interconnection with other telecommunications operators and/or integrators.

This expedites the activation of new links meaning we can offer high levels of availability and protection of installed equipment and services.

SOLUTIONS

- lyntia's co-location services help to protect critical data with the highest levels of operational security
- lyntia offers flexible solutions with a wide range of space options to cover the needs of our clients

ADVANTAGES

- All of our nodes and data centres are connected to our fibre optic network
- Our data centres maintain the highest reliability and security standards: temperature control, energy backup, fire-fighting and access control systems and monitoring systems under Tier 3 standards
